

# Model-card documentation

Current cards · automated rubric checks

## Field coverage

| Model Card Modules  | DenseNet-121         | SubCell 650M         |
|---------------------|----------------------|----------------------|
| Core metadata       | 10/13                | 11/13                |
| Model identity      | 17/24                | 16/24                |
| Architecture & data | 11/16                | 13/16                |
| Compute             | 0/5                  | 0/5                  |
| Training            | 4/18                 | 10/18                |
| Evaluation          | 7/17                 | 6/17                 |
| Use & risks         | 7/7                  | 7/7                  |
| Benchmark results   | 11/16                | 11/16                |
| Mission context     | 1/4                  | 0/4                  |
| Usage               | 6/6                  | 6/6                  |
| <b>All fields</b>   | <b>59%</b><br>74/126 | <b>63%</b><br>80/126 |

## Evaluating the quality of content

| DenseNet-121                                          | SubCell 650M        |
|-------------------------------------------------------|---------------------|
| <b>Rubric 10</b>                                      |                     |
| <b>94%</b><br>47/50                                   | <b>90%</b><br>45/50 |
| <b>Rubric 20</b>                                      |                     |
| <b>80%</b><br>67/84                                   | <b>74%</b><br>62/84 |
| Scores rate the documentation, not model performance. |                     |

Shade = fraction of maximum (both panels)    Lower  Higher

Presence includes optional fields; an empty field is not necessarily a defect.  
Documentation measures, not model performance. No new semantic scoring.
