

Model cards: structured field presence and documentation checks

DenseNet-121 (timm/densenet121.tv_in1k) | SubCell 650M (SaProtHub/Model-Subcellular_Localization-650M)

A Field-value presence

Non-empty values at all 126 terminal schema paths; list indices collapsed

Populated (non-empty)

Empty or absent

Presence counts structure, not accuracy.

Full field paths are available in the CSV.

Labels omit each group's shared prefix.

The same two cards appear in both blocks.

Q16 Findability / persistent landing	1/1	1/1
Q17 Access / inference path	5	5
Q18 Performance, slices and uncertainty	3	3
Q19 Out-of-scope uses / limits / tradeoffs	5	3
Q20 Cross-platform links	1/1	1/1
How to read presence		
A path is filled if any list entry has a non-empty value.		
Prose elsewhere does not fill a structured field.		
Optional fields are retained; no applicability filter is used.		

Training fields: 4/18 vs 10/18.

Compute fields: 0/5 vs 0/5. Original-run records remain unavailable.

Presence ≠ documentation quality or model performance. Optional and extension fields are included; absent values are not necessarily defects.

Sources: current YAML + SHA-256-matched hybrid results; current evaluators reproduce every item score. Automated documentation checks, not model performance.

Blue visual language adapted from D4D figures 3 and 5. Editable vector text; full paths, evidence, result hashes and evaluator hashes accompany this figure.
